RESEARCH INTERESTS

Learning and decision-making is strongly influenced by social information, particularly across development. Learning from others allows rapid acquisition of new behaviour without taking potential risks of individual trial-and-error learning. The extent to which learning influences new behavior depends also on memory. To understand learning and decision-making processes and their influencing factors across development is central for educational practice. However, the mechanisms underlying these processes are still poorly understood. Here, my research comes into play. The aim of my research is to investigate developmental differences in learning and decision-making processes and their interaction with social information and memory processes. I want to understand these processes in the controlled laboratory session as well as in the applied context of school. To do this, I use a multi-methodological approach that combines experimental psychological methods, behavioral analyses, computational modelling, imaging and electrophysiological measures.

CURRICULUM VITAE

- 
- Since 2022
Postdoc, University of Greifswald
 - since 2022
Guest-Postdoc Social Intelligence Lab, Humboldt Universität Berlin
 - 2017 - 2022
Postdoc, Freie Universität Berlin
 - 2017
Dr. rer. nat. in Psychology, Freie Universität Berlin
 - 2016
DAAD Fellow, Leiden University
 - 2011-2015
Doctoral Fellow, Berlin School of Mind and Brain
 - 2013-2014
Parental leave
 - 2011
Diploma (M.A. equivalent) in Psychology (grade: very good), Humboldt University Berlin
 - 2009
ERASMUS student, University of Glasgow
